

Biometrics Identification and Registration

The **Vishvas Foundation** (VF) is an international umbrella organization headquartered in Dagshai, India. It is a spiritual, social, cultural and educational organization established in 1978 with more than 36 schools and colleges in northern India. In addition to the Vishvas Education Board, it also manages Vishvas Vidya Mandirs (Free Schools), Orphan Homes, Women's Workforce Development Centres, Computer Centres, Medical Foundations, Eye Foundations, Hospitals, Ayurvedic and Homoeopathic Dispensaries. Through its hospitals and health clinics, VF also provides free health care services to those with no means. It also supports a multitude of noble human services like physical and spiritual relief in times of natural calamities, poor girl's marriages, free food bhandaras in hospitals and scholarship to meritorious but needy and poor children.

VF presence in different cities in a large region of India was originating problems during visitor's registration such as personal data duplicity and procedure slowness.

Those gaps in the identification process could cause impact on VF's quality of services by means of non-authorized person to stay at its facilities.

Customer Quote:

"VF is deeply satisfied with Griaule Fingerprint SDK software and overall technical solution because, after deployment, we can focus on delivering high quality social services to the people of India."

Vishvas Foundation

Bayometric Solutions was invited by VF to develop an identification system that could address those issues as well as add a security layer to the personal registration procedure.

The application – based on Visual Basic 6 and SQL Server – required the use of biometrics technology and Griaule's SDK Fingerprint was selected after an extensive technical

evaluation because of its fast recognition capability and the ability to work with virtually all scanners in the market.

System launching, named Visitor Attendance Application, allowed VF to reduce all manual work, reducing human errors and paperwork, while maintaining high quality of services.

Needs

- Personal data duplicity elimination
- Adoption of a cost-effective solution
- Paperwork reduction during personal identification procedures

Benefits

- Efficient and fast personal identification procedures
- Personal data secure access
- High quality services to users
- Operational costs reduction after solution deployment

Future Scenarios

- Disseminate biometrics solutions thru all VF's social programs centres

About Griaule Biometrics

Griaule fingerprint recognition software is the powerful technology behind thousands of biometric transactions made daily all over the world.

Whether it's used for time attendance or criminal investigation, we have the solution for large and small scale organizations. We are providing the means for the future of widespread and daily use of biometrics.
